

## ADAM POMPOSELLI

Freelancer

### PRESENTATION

I've been developing for 5 years in many industries, such as the web, video games, blockchain, testing, and embedded programming. Working with such a variety of technologies forced me to work with many programming languages such as C, C++, C#, Javascript, Typescript, Java, PHP, etc. This engrained not only programming principles but engineering concepts that I profit from in my day-to-day work. I am open to any new challenge and I can adapt really fast due to my really versatile experience.

To summarise, I worked in game development for 4 years. In parallel, I learned full-stack web development and blockchain development for 2 years. I then started my graduate studies at ESGI and had to find a job in IT to validate my semester. I applied for a web developer position but ended up working as a QA Automation Tester for 6 months.

### HARD SKILLS

React (Typescript)

Game Developement (Unity/C#)

Selenium (WebDriver)

UX/UI (Figma, Adobe XD)

Cypress

## EXPERIENCE

### Freelance Web Developer - Agence ZED

May 2022 - June 2022 · 2 Months

- Mainly worked with WordPress and many popular plugins such as Divi, WPML, ACF, and others.
- Create the user interface using Divi and based on the designer's mockups for the website.
- Migrate the preproduction website to the live website's web server.
- Using WPML and in collaboration with a freelance translator, implement a multilingual feature across the entire website.
- Setup and management of a business email with OVH.
- Newsletter subscription and management with MailChimp
- Development of a back-office for the product owner, allowing him to add content to his website without the need for developer intervention.

### QA Tester - Equativ (formerly Smart)

November 2021 - April 2022 · 6 Months

- Collaborated with four software development engineers to understand the features and architecture of their multiple web-based applications so that they could be tested 100% efficiency.
- Improve the documentation of the QA process and provide daily status reports to the development team to reduce the likelihood of bugs and performance issues.
- Assisting in all aspects of product testing, including test plan development, functional and technical design specifications definition, automation (Cypress, Selenium), execution, and delivery of well-tested solutions within tight deadlines.
- Keep project-related websites up to date (web development).

### Freelance Web Developer & Blockchain Developer

June 2021 - July 2021 · 1 Month

- NextJs, styled-components, and Material UI were used to create a single-page web application.
- Using Web3js to handle both the application's communication with blockchain (Ethereum) and blockchain transactions (MetaMask) to purchase NFTs.
- Development and deployment of the project's smart contract using Solidity and Hardhat
- Smart Contract debugging and testing with Hardhat and Chai testing library

### Technical skills

- QA Testing Methodologies : Blackbox, Troubleshooting, Performance Testing, Smoke, Acceptance, Regression, Exploratory
- Libraries & Frameworks : Cypress, Selenium, Appium, React-testing-library, Chai, Mocha
- Atlassian products : Jira, Bitbucket
- Versionning Tools : Git, SourceTree
- Database work : SQL

## EDUCATION

Graduate Studies | ESGI - École Supérieure de Génie Informatique  
Completed First Year

Baccalaureate | Lycée Louis le Grand (Paris 5)  
BAC STI2D option SIN (With Highest Honour)
